12 Weeks 5+ Mini Projects AI + Agentic Workflows 1 Capstone

3 Months (12 Weeks)	Weekday technical sessions + weekly hands-on practice + mini projects	Excel, SQL, Python, Power BI + AI stack	Portfolio-ready capstone, resume, GitHub & interview-readiness
---------------------	---	---	--

The DAAP program takes complete beginners from Excel fundamentals to a full, portfolio-ready Data Analytics skill set — Excel, SQL, Python, Power BI — while embedding Generative AI and Agentic AI into every stage of the learning journey. Students learn to analyze real data, build dashboards, use current AI tools, create RAG applications and build tool-connected analytics agents.

MODULE	WHAT YOU WILL LEARN
Excel Fundamentals & Dashboards	Formulas, formatting, data validation, pivot tables, pivot charts, slicers, dashboards + AI-assisted spreadsheet analysis.
SQL — Basics to Advanced	DBMS/RDBMS, querying, joins, subqueries, CTEs, window functions, real datasets + AI-assisted SQL generation and validation.
Python for Data Analysis	Core Python, NumPy, Pandas, cleaning, transformation, analysis + AI coding assistants and agentic coding workflows.
Data Visualization & EDA	Matplotlib, Seaborn, EDA, storytelling + multimodal AI for chart interpretation and hypothesis generation.
Statistics for Data Analysts	Descriptive statistics, probability, correlation, hypothesis testing + AI evaluation, hallucination checks and analytical validation.
Power BI	Data modeling, DAX, measures, Power Query and dashboards + AI-powered narratives and governed insight workflows.
Generative AI + RAG	Prompt engineering, structured outputs, LLM APIs, embeddings, vector search, RAG, multimodal workflows and evaluation.
Agentic AI + Frameworks	Tool calling, planning, state, memory, guardrails, human approval, LangChain, LangGraph, LlamaIndex, CrewAI, AutoGen, Agents SDK, PydanticAI, Semantic Kernel and MCP.
Mini Projects + Capstone	5+ hands-on projects, AI/RAG builds, analytics agents, production-style workflow and an end-to-end portfolio capstone.

- Complete analyst toolkit — Excel, SQL, Python and Power BI — with AI integrated into the same workflow instead of being taught as a separate topic.
- Every 3 weeks ends in a mini project; AI is used to accelerate the work, but students must validate outputs with data and code.
- Students learn current Generative AI concepts: prompting, structured outputs, APIs, embeddings, vector search, RAG and multimodal analysis.
- Students progress into Agentic AI: planning, tool use, state, memory, guardrails, human approval, evaluation and observability.
- Framework exposure includes LangChain, LangGraph, LlamaIndex, CrewAI, AutoGen, OpenAI Agents SDK, PydanticAI, Semantic Kernel and MCP.
- Current AI tools include GPT-6 Astra / GPT-5.6 family, Claude, Claude Code, Google AI/Gemini ecosystem and AI coding assistants.
- Career readiness runs alongside technical weeks — resume, LinkedIn, job strategy, GitHub portfolio and mock interviews.

Week 1: Introduction to Data Analytics & Excel Basics

Introduction to Data Analytics, Data Analyst role, analytics process, Excel rows/columns, formatting, data types and formulas (SUM, AVERAGE, COUNT, MAX, MIN). **GenAI:** AI fundamentals, LLM basics, prompt engineering, role/context/task/output prompts, responsible AI. **Agentic:** what an AI agent is, model vs tool vs agent, basic plan → act → observe loop.

SAT

CAREER

Resume Optimization I — ATS-friendly formatting, action verbs, quantifying impact and fresher resume template workshop.

SUN

INTERVIEW PREP

Fun + Interview Prep I — HR mock interviews, self-introduction, Excel basics quiz and AI-awareness discussion.

Week 2: Excel — Data Cleaning & Functions

Conditional formatting, data validation, removing duplicates, text/date functions. **GenAI:** prompt templates, structured outputs, spreadsheet formula assistance, data-cleaning explanations. **Agentic:** designing a safe AI workflow that reviews a spreadsheet and asks for human confirmation before changes.

SAT

CAREER

LinkedIn Optimization I — Headline, About, skills, profile positioning and analytics/AI keywords.

SUN

INTERVIEW PREP

GD + Interview II — Is data literacy the new must-have skill? Excel Q&A; and prompt-writing exercise.

Week 3: Excel Dashboards + AI Insights

Pivot tables, pivot charts, slicers, sparklines, What-If analysis, charts and complete dashboard creation. **GenAI:** KPI explanations, insight generation and narrative drafting. **Agentic:** dashboard insight agent design with data validation.

AI + MINI
PROJECT

AI-Assisted Sales Dashboard in Excel — build an interactive dashboard using pivots, charts and slicers, then compare AI-generated insights with the actual numbers.

SAT

CAREER

Job Strategy I — Job portals, Boolean search strings, smart applications and application tracker.

SUN

INTERVIEW PREP

Dashboard Showcase + Interview III — Present the Sales Dashboard; dashboard Q&A; and AI-generated insight validation.

Week 4: SQL Basics

DBMS, RDBMS, databases, tables, data types, CREATE, INSERT, UPDATE, DELETE, SELECT, WHERE, ORDER BY, LIMIT, DISTINCT. **GenAI:** natural-language-to-SQL prompting and query explanation. **Agentic:** read-only database tools, permissions and safe query execution.

SAT

CAREER

Resume Optimization II — Projects, GitHub/portfolio links, certifications and recruiter-screening preparation.

SUN

INTERVIEW PREP

Technical Interview I — SQL SELECT, WHERE, ORDER BY, DISTINCT; query-writing challenge and AI-assisted SQL verification.

Week 5: SQL Advanced

Aggregate functions, GROUP BY, HAVING, CASE WHEN, string/date functions, joins (Inner, Left, Right, Full) and subqueries. **GenAI:** text-to-SQL, query optimization suggestions and explain-plan interpretation. **Agentic:** tool calling, SQL safety rules and business-question-to-query workflow.

SAT	CAREER LinkedIn Optimization II — Posting strategy, recruiter engagement, job alerts, InMail and alumni outreach.
SUN	INTERVIEW PREP GD + Interview V — Will AI replace data analysts? SQL joins/subqueries mock interview and team SQL puzzle.

Week 6: SQL Advanced II + SQL Agents

CTEs, views, indexes, window functions (ROW_NUMBER, RANK, DENSE_RANK), stored procedures introduction and real-dataset practice. **GenAI:** complex query generation with mandatory validation. **Agentic:** SQL Analyst Agent architecture — schema discovery → query plan → read-only execution → result validation → business answer.

AI + MINI PROJECT	SQL Database Analysis + SQL Analyst Agent — answer business questions on a relational database and build a guarded read-only agent that generates and validates SQL.
SAT	CAREER Job Strategy II — Cold-email templates, LinkedIn connection messages, referral strategies and analyst openings.
SUN	INTERVIEW PREP SQL Project Showcase + Interview VI — Present SQL Database Analysis; window functions Q&A; and agent architecture discussion.

Month 1 outcome: Students can work with spreadsheets and relational data, use AI responsibly for productivity, and understand how a data agent connects an LLM to controlled SQL tools.

Week 7: Python Basics + AI Coding	
Variables, data types, operators, conditionals, loops, functions, lists, tuples, sets, dictionaries and file handling. GenAI : code generation, debugging, explanation, documentation and test creation. Agentic : coding-agent workflow, repository context, permissions and human review.	
SAT	CAREER Resume Optimization III — Data Analyst resume specifics, SQL/Excel/Python projects, certifications, ATS testing and JD tailoring.
SUN	INTERVIEW PREP GD + Interview VII — Excel vs Python — which matters more? Python basics quiz and live mock interview.
Week 8: Python for Data Analysis + RAG	
NumPy arrays/indexing/reslicing; Pandas Series/DataFrames, CSV/Excel, cleaning, missing values, GroupBy, merge and pivot. GenAI : embeddings, vector search, chunking, retrieval and RAG. Agentic : retrieval tool, source grounding and answer verification.	
SAT	CAREER LinkedIn Optimization III — Featured section, project demos, certifications and analytics content calendar.
SUN	INTERVIEW PREP Technical Interview VIII — NumPy & Pandas Q&A; peer code review and RAG architecture walkthrough.
Week 9: Data Visualization & EDA + Multimodal AI	
Matplotlib, Pandas visualization, Seaborn (heatmap, box plot, pair plot, count plot) and exploratory data analysis. GenAI : multimodal analysis of tables/charts/images, hypothesis generation and narrative drafts. Agentic : EDA agent that proposes analyses and validates them with Python.	
AI + MINI PROJECT	Retail EDA + AI Hypothesis Lab — perform EDA with Pandas/Matplotlib/Seaborn, use AI to propose hypotheses, then validate every claim in Python.
SAT	CAREER Job Strategy III — Salary negotiation basics, offer-letter reading, background verification and analyst career ladder.
SUN	INTERVIEW PREP EDA Project Showcase + Interview IX — Present Retail EDA; storytelling feedback, visualization Q&A; and AI-hypothesis validation.

Week 10: Statistics for Data Analysts + AI Evaluation	
Mean, median, mode, standard deviation, variance, probability, normal distribution, correlation, hypothesis testing and sampling. GenAI : analytical reasoning checks, hallucination detection, benchmark design and prompt evaluation. Agentic : guardrails, confidence checks, human approval and evaluation loops.	
SAT	CAREER Final Resume Polish — 1-on-1 reviews, GitHub profile, portfolio links and LinkedIn headline audit.
SUN	INTERVIEW PREP Mock HR + Fun X — HR simulation, soft skills, body language coaching and AI-era interview questions.
Week 11: Power BI + AI-Powered BI	
Power BI Desktop, data import, Power Query, data cleaning, data modeling, relationships, DAX basics, measures, calculated columns, visuals, filters, slicers and dashboard design. GenAI : AI-assisted DAX explanations and narrative insights. Agentic : governed BI assistant workflow with approved data sources.	
AI + MINI PROJECT	HR or Sales Power BI Dashboard + AI Narrative — create a complete interactive dashboard and produce a validated AI-assisted business narrative.
SAT	CAREER Job Strategy IV + Portfolio Prep — Interview etiquette, portfolio walkthrough, project storytelling and professional presentation.
SUN	INTERVIEW PREP Power BI Dashboard Showcase + Panel — Present dashboard; DAX/data modeling Q&A; and AI insight validation.
Week 12: End-to-End AI Data Analyst Capstone	
Raw-data cleaning, SQL analysis, Python EDA, Power BI dashboard, KPI creation, storytelling, resume and portfolio. GenAI : solution design, documentation, structured outputs and model/tool selection. Agentic : full workflow — plan → retrieve → SQL/Python tools → analyze → validate → human review → report.	
AI + MINI PROJECT	End-to-End Agentic Data Analytics Project — build a portfolio-grade solution such as Sales Intelligence Agent, HR Analytics Copilot, Finance KPI Agent, Customer Support Analytics Agent or Data Quality Agent.
SAT	CAREER Post-Program Job Strategy — 30-60-90 day job-search plan, follow-up cadence, LinkedIn activity, alumni network and referrals.
SUN	INTERVIEW PREP Final GD + Grand Panel — The future of the Data Analyst role; final capstone Q&A;,, panel presentation and portfolio review.

WEEK	SATURDAY THEME	KEY ACTIVITIES
Week 1	Resume Optimization I	ATS formatting, action verbs, quantifying impact, peer review
Week 2	LinkedIn Optimization I	Headline, About, Skills, analytics + AI positioning
Week 3	Job Strategy I	Portals, Boolean search, application tracker
Week 4	Resume Optimization II	Projects, GitHub links, certifications, recruiter screening
Week 5	LinkedIn Optimization II	Recruiter engagement, InMail, alumni outreach, job alerts
Week 6	Job Strategy II	Cold email, referral playbook, analyst openings
Week 7	Resume Optimization III	AI/Data projects, ATS testing, JD tailoring
Week 8	LinkedIn Optimization III	Featured projects, certifications, analytics content
Week 9	Job Strategy III	Salary negotiation, offer letters, career ladder
Week 10	Final Resume Polish	1-on-1 review, GitHub + portfolio audit
Week 11	Job Strategy IV + Portfolio Prep	Interview etiquette, portfolio walkthrough
Week 12	Post-Program Job Strategy	30-60-90 day plan, follow-up cadence, alumni network

WEEK	SUNDAY SESSION	INTERVIEW FOCUS
Week 1	Fun + Interview Prep I	HR: self-introduction, strengths, Excel basics
Week 2	GD + Interview II	Excel Q&A;, prompt-writing exercise, peer review
Week 3	Dashboard Showcase + Interview III	Excel dashboard Q&A;, AI insight validation
Week 4	Technical Interview I	SQL basics, safe AI-assisted SQL
Week 5	GD + Interview V	SQL joins/subqueries, AI replacement debate
Week 6	SQL Project Showcase + Interview VI	Window functions, SQL Agent architecture
Week 7	GD + Interview VII	Python basics, coding-agent concepts
Week 8	Technical Interview VIII	NumPy/Pandas, RAG architecture
Week 9	EDA Project Showcase + Interview IX	Visualization, EDA, multimodal AI
Week 10	Mock HR + Fun X	Soft skills, body language, AI-era interview
Week 11	Power BI Dashboard Showcase + Panel	DAX, modeling, AI narrative validation
Week 12	Final GD + Grand Panel	Capstone Q&A;, agent architecture, portfolio defense

WEEK	PROJECT	DESCRIPTION
Week 3	AI-Assisted Sales Dashboard in Excel	Interactive dashboard using pivot tables, charts and slicers; AI-generated insights validated against source data.
Week 6	SQL Database Analysis + SQL Analyst Agent	Business analysis on a relational database plus a guarded read-only agent for SQL generation and validation.
Week 8	Data Analyst Knowledge Assistant	RAG application using documents/data, embeddings, vector search, retrieval and grounded answers.
Week 9	Python EDA + AI Hypothesis Lab	Retail EDA using Pandas, Matplotlib and Seaborn; AI proposes hypotheses, Python validates them.
Week 11	Power BI Dashboard + AI Narrative	Interactive HR/Sales dashboard with DAX, modeling and validated AI-assisted narrative.
Week 12	End-to-End Agentic Data Analytics Project	Raw data → SQL → Python → Power BI → AI/agent workflow → validation → final presentation.

CATEGORY	TOOLS / TECHNOLOGIES
Spreadsheet	Microsoft Excel — formulas, pivot tables, pivot charts, dashboards, What-If analysis + AI-assisted analysis
Database & Query	SQL — MySQL/PostgreSQL, joins, subqueries, CTEs, window functions, stored procedures + SQL agent patterns
Programming	Python 3, NumPy, Pandas + AI coding assistants / Claude Code
Visualization	Matplotlib, Seaborn, Power BI + multimodal AI workflows
Business Intelligence	Power BI Desktop, Power Query, DAX, data modeling + AI-powered narratives
Statistics	Descriptive statistics, probability, correlation, hypothesis testing + AI evaluation
Generative AI	GPT-6 Astra / GPT-5.6 family, Claude, Google AI/Gemini ecosystem, prompts, structured outputs, APIs, embeddings, vector search, RAG, multimodal AI
Agentic AI	Tool calling, planning, state, memory, guardrails, human approval, evaluation, observability
Frameworks	LangChain, LangGraph, LlamaIndex, CrewAI, AutoGen, OpenAI Agents SDK, PydanticAI, Semantic Kernel, MCP
Career Tools	Resume, LinkedIn, GitHub, portfolio building, mock interviews, job strategy

Final Outcome: Students finish with the original DAAP Data Analyst foundation plus practical Generative AI, RAG, agentic analytics, framework and AI-tool experience — supported by 5+ projects, a complete capstone, GitHub portfolio and interview preparation.
